

Sick of running the same case over and over?

Us too.

Instead of running the same SecureCare™ III case multiple times to compare different policy design options, we've created a report that does the work for you.

Our "Alternative design options" report will be automatically generated each time you run a proposal for SecureCare III, a long-term care (LTC) and nonparticipating whole life insurance policy.

The report will help you answer two key questions for your client:

1. Is that the right premium schedule?

- See how much annual premium your client would need to produce the same day 1 and chosen future summary age LTC benefit pools as currently illustrated if they selected a different premium schedule.

2. Is that the right return of premium (ROP) option?¹

- See how a different ROP option would impact your client's LTC benefit pool when using the same illustrated premium.
